

## Furniture Fabrics

### Cleaning Instructions

Sunfield is sprayed with a resin fluorocarbon that gives the following characteristics:

Resistance to natural build up of dirt.

Oil and water-repellency for a long time.

Excellent dimensional stability.

Sunfield will provide adequate protection from exposure to outdoor elements, under normal conditions. Like any other product, a little care and periodic maintenance will enhance the life of the fabric. To maximize the performance of the fabric, it is advisable:

1. To remove dust periodically from the dry cover, with a soft brush or a vacuum cleaner.
2. To wash with clean water at a temperature of not more than 86 F (30 C), when the dirt is persistent.
3. To use a trichloroethylene blotter: or a common dry cleaner for grease stains.
4. To never use any other chemical product.
5. To avoid the build up of water bags.
6. To never roll up the cover when the fabric is wet.
7. To store the products indoors when not in use.
